

# One-shot molded hollow shaft

- Mass Production
- Prototype
- Development

Precision

## Product Features

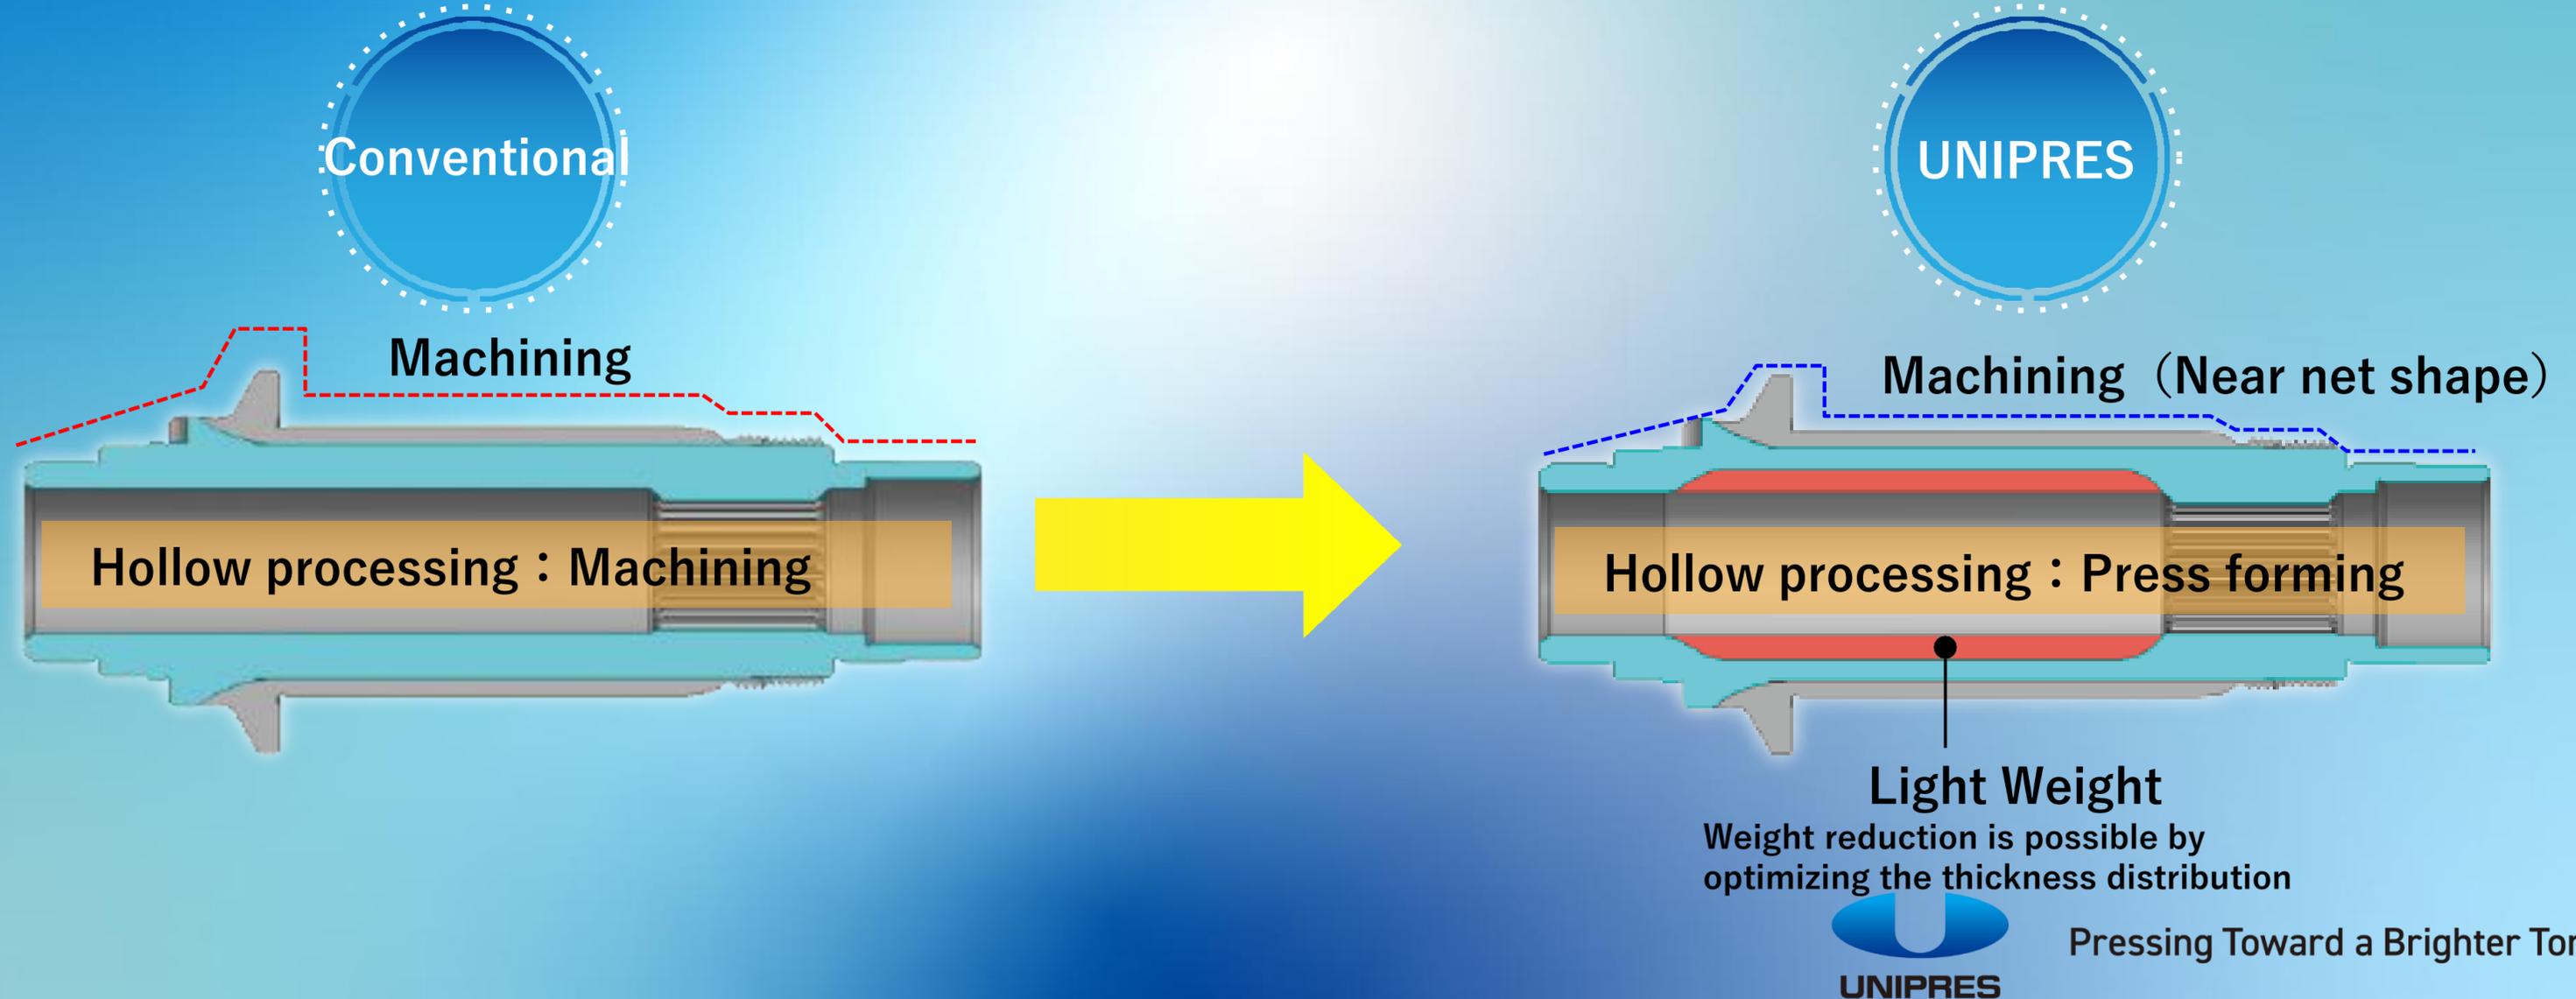

### Light Weight : 17% Reduction

Compared to our conventional methods

- Reduces machining process costs by high-precision press forming from pipe material.
- Weight reduction is possible by optimizing the thickness distribution of the hollow section.

## Product Technology

- Material flow control (thickness increase/decrease) is also possible when forming steel pipes.
- Both ends can be reduced in diameter in a single shot.
