

EV Transmission System with Improved Starting Torque

- Mass Production
- Prototype
- Development

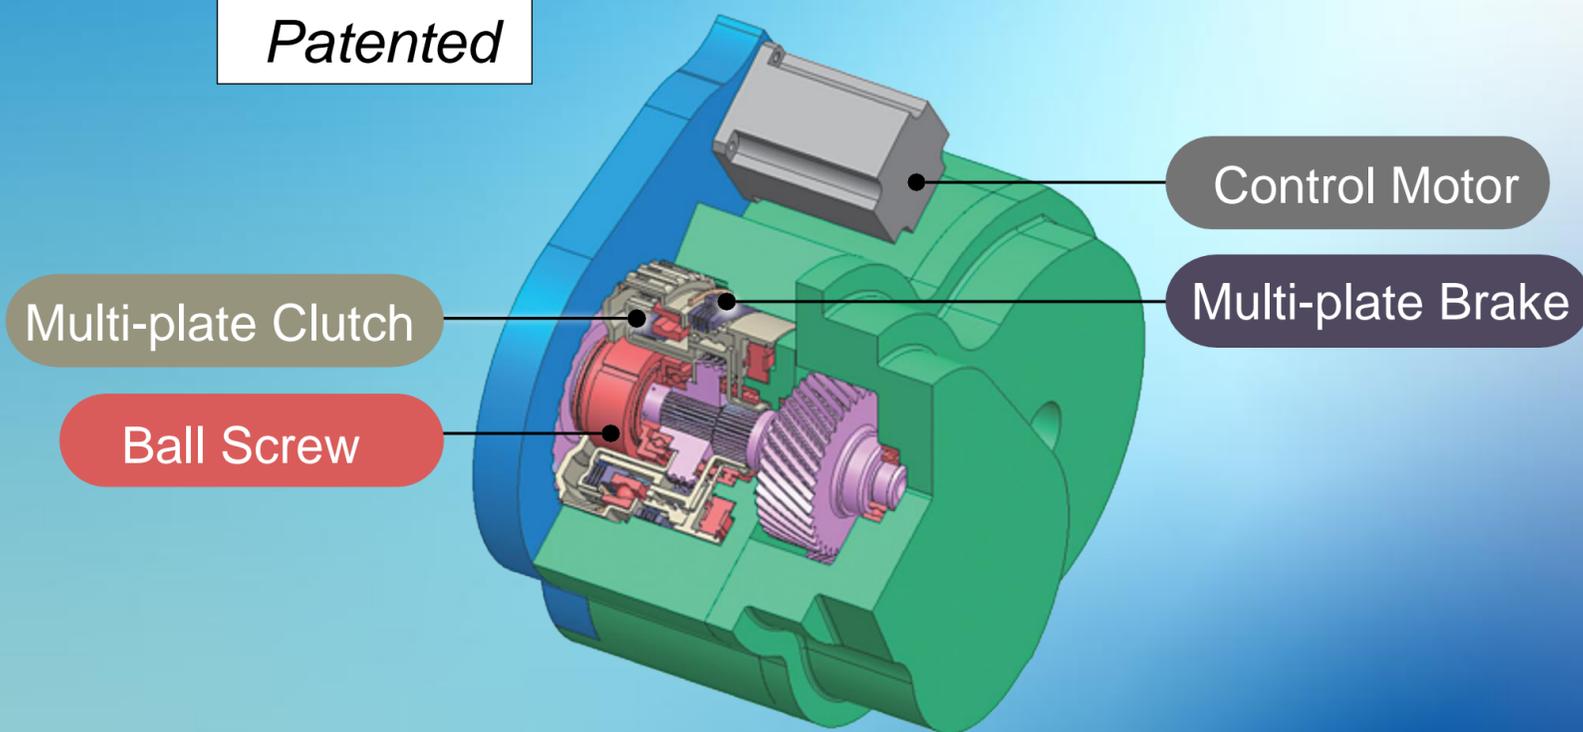

Precision

Product Features

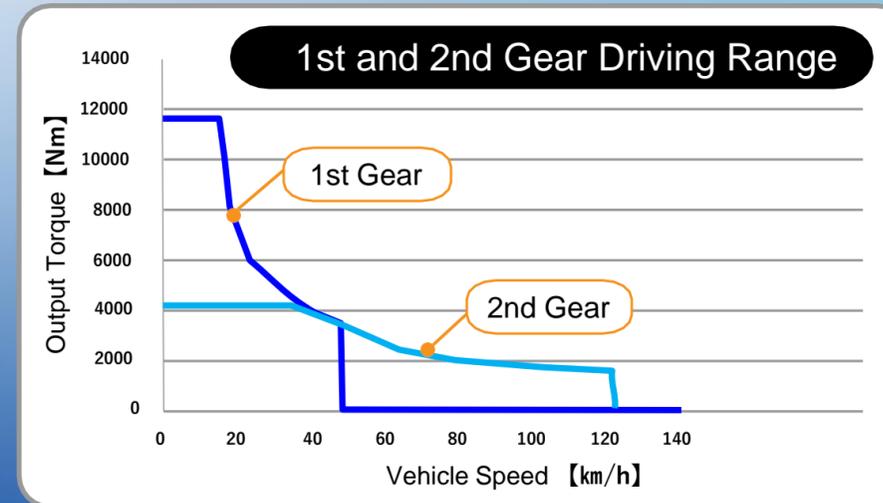

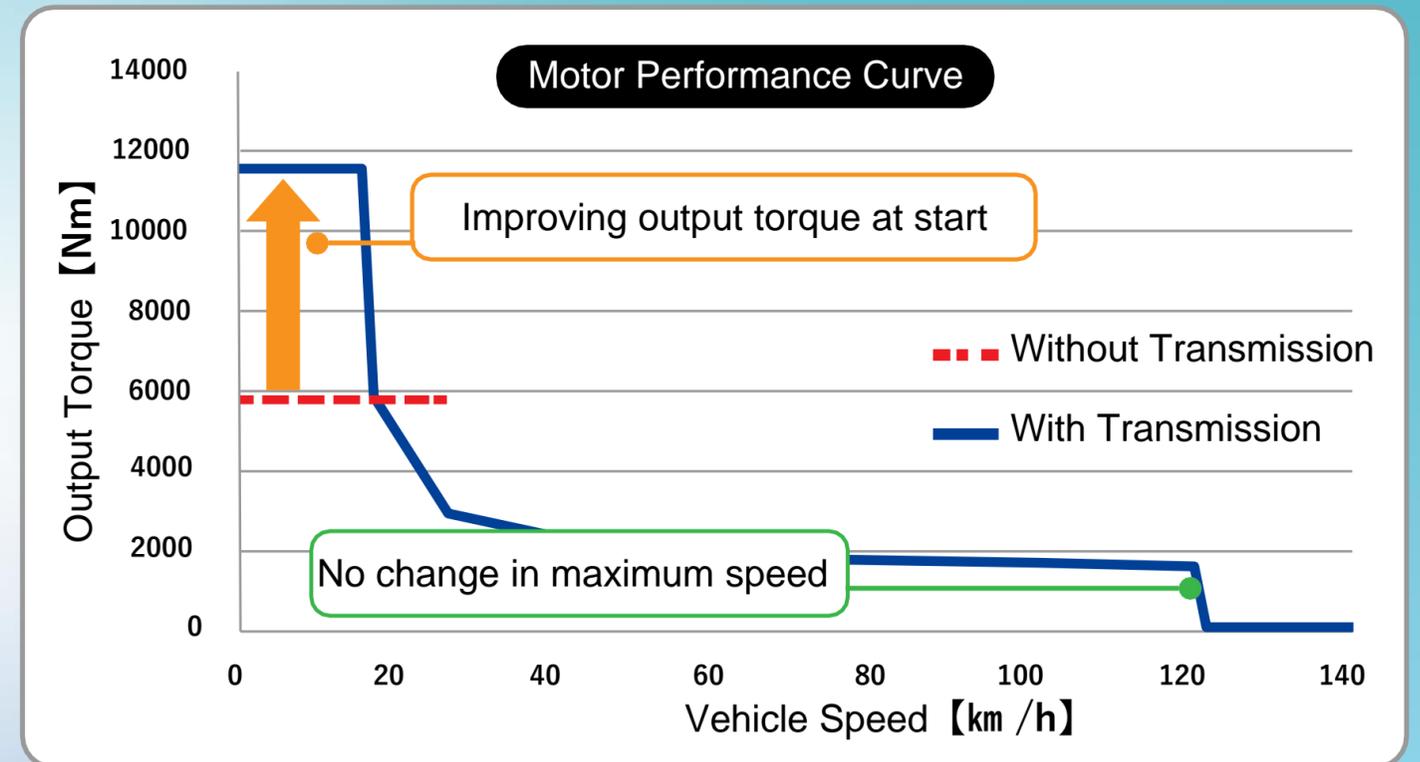

- A transmission system that converts rotational force into thrust force (Hydraulic-free System)
- Improved Starting Performance
- Reduces motor heat generation and allows for a smaller motor size by lowering the required maximum output

UNIPRES 2-Speed Transmission

Patented

Product Technology

In-house Evaluation Items

- Measuring electric consumption
- Shifting Performance

Pressing Toward a Brighter Tomorrow
