- Mass-Produced
- Prototyping Available
- Independent development

Plastic

Process Features

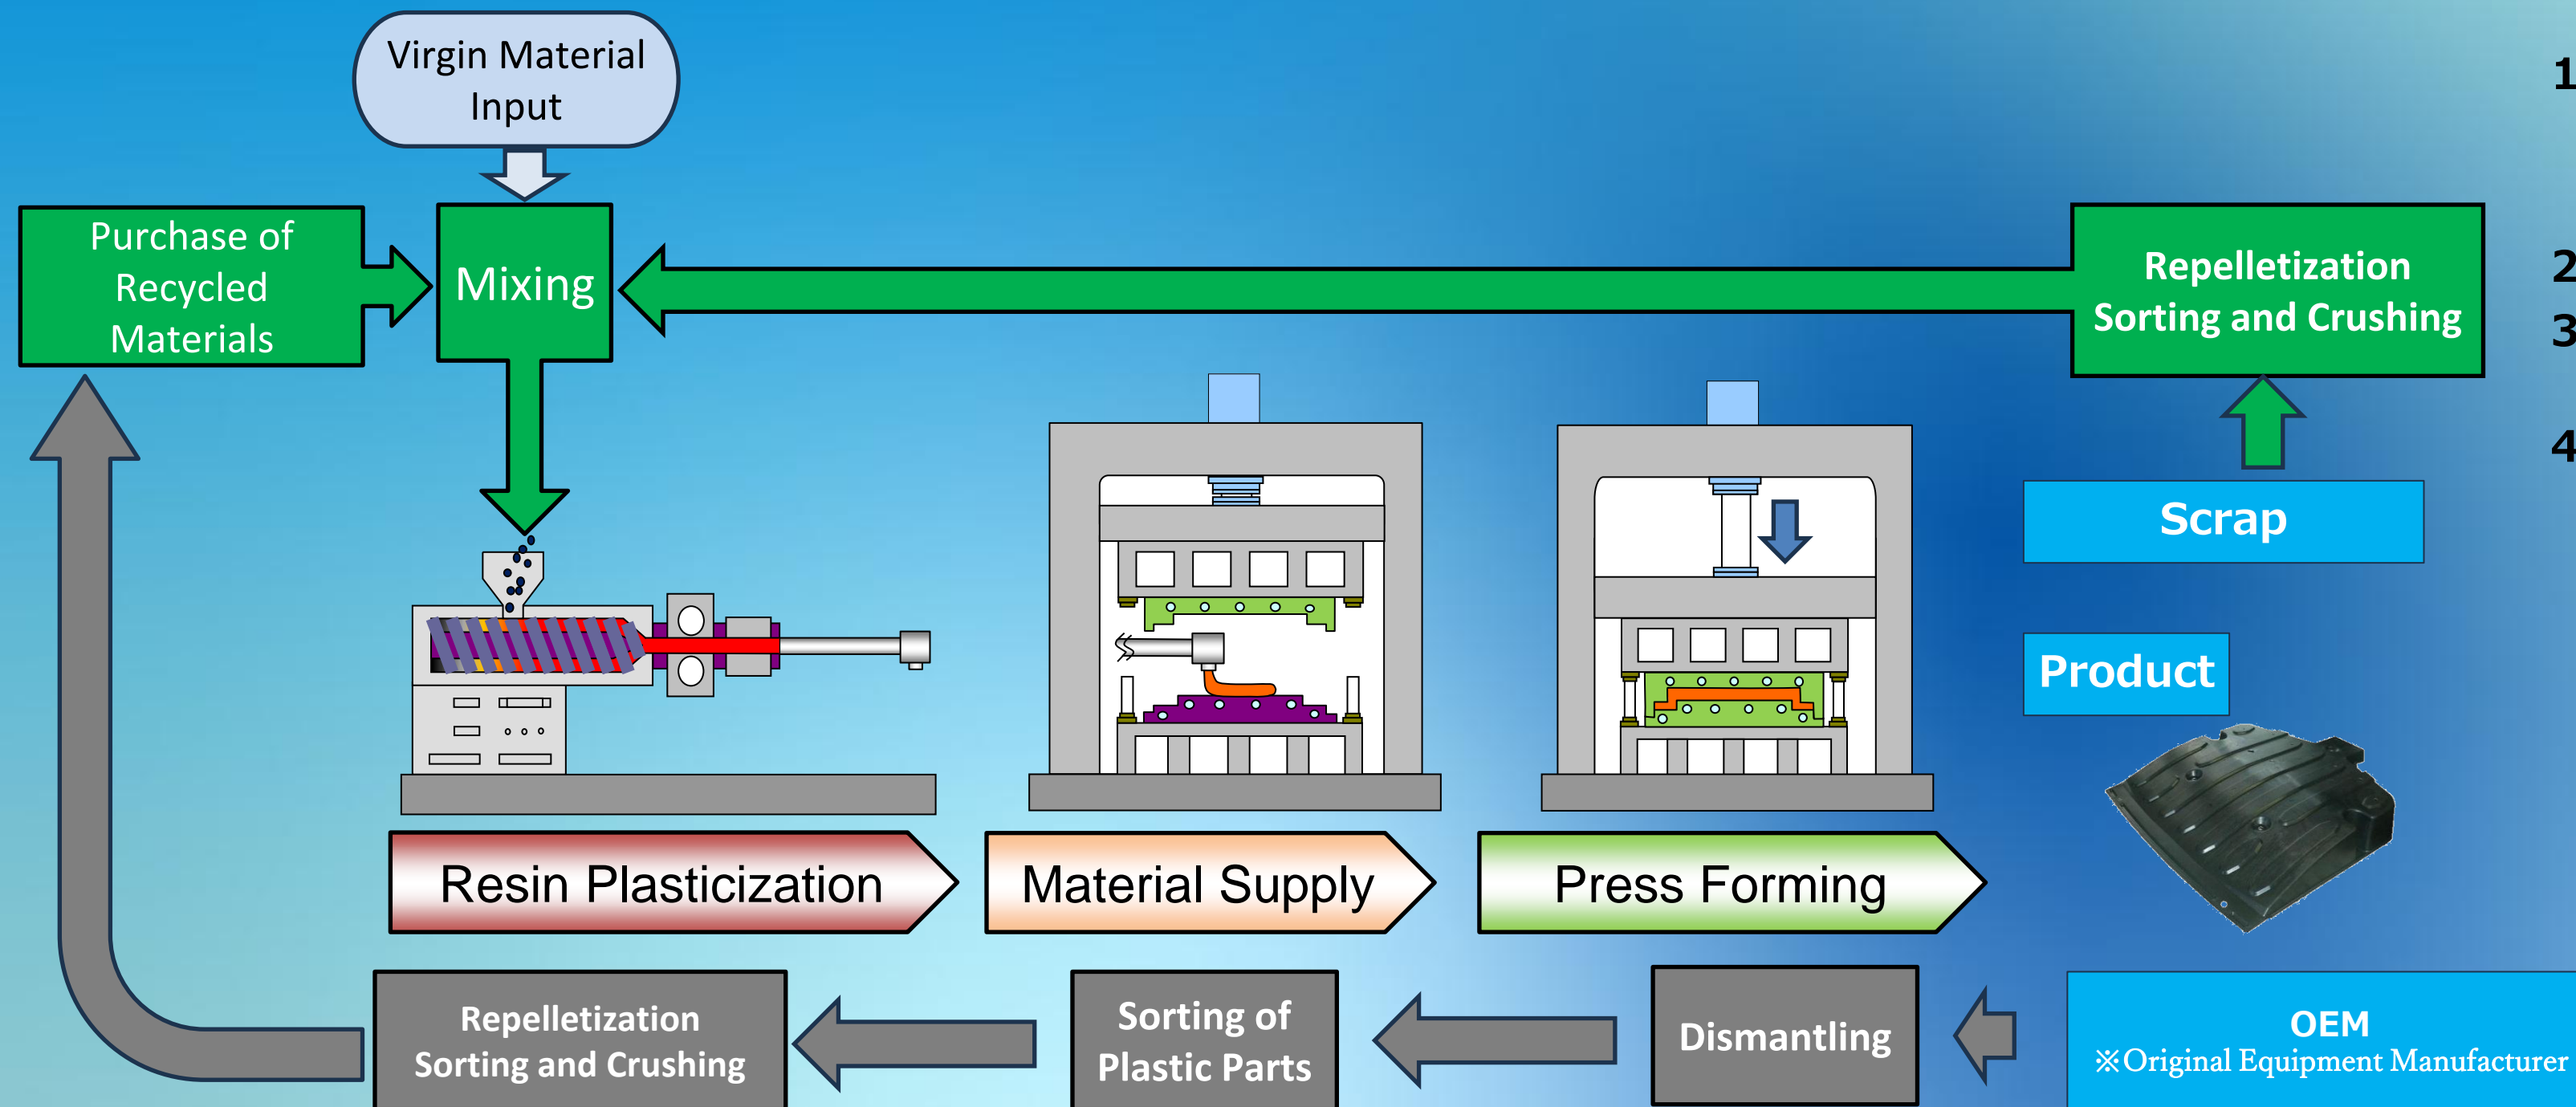

USM Unipres Stamping Molding

- This is our proprietary press forming technology that enables the production of large-scale plastic components with reduced thickness, lighter weight, and lower cost through automation.

Molding Method

Features

1. Low-pressure molding capability (The Half pressure(ton) of Injection molding)
2. Utilization of recycled materials
3. Forming flexibility (Equivalent to injection molding)
4. High-impact-strength and high-rigidity products can also be provided by incorporating materials such as glass fiber into the resin.

Pressing Toward a Brighter Tomorrow
